

Data Fusion. How combined IoT & AI systems increase business.

Our physical limits today . . . human AI input

Increase in Brain Size

A) Previous hypotheses

- Improved dietary quality
- **Cooking** (Wrangham et al)
- Access to key brain nutrients (Cunnane et al)

B) What Hardy's paper adds

- **Cooked starchy tubers** (Hardy et al)

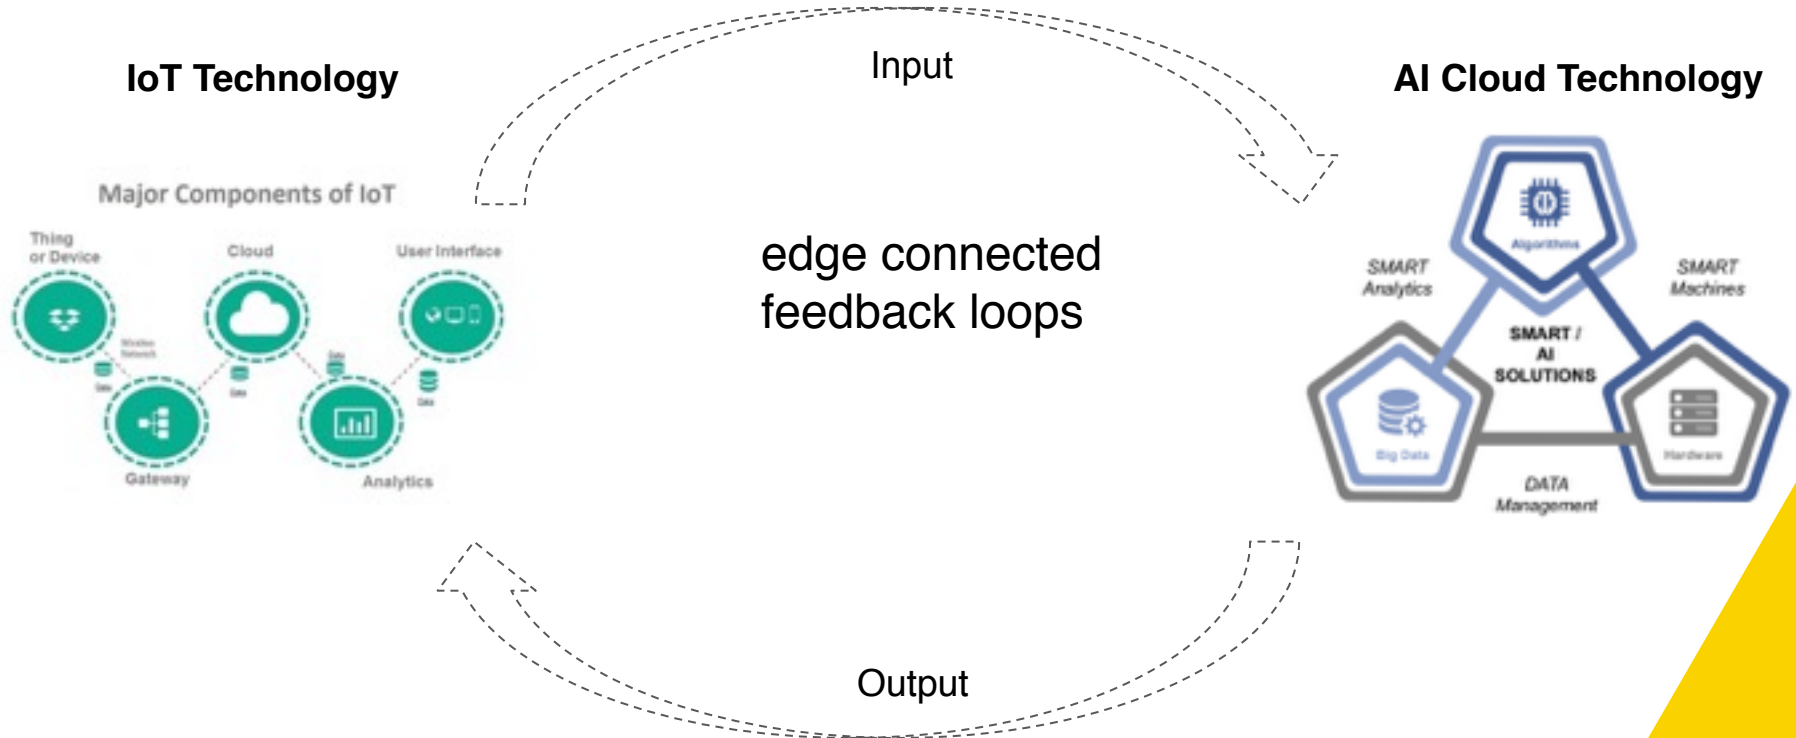

human brain capacity

human interfaces to
the digital world

the game changer: bundled solution

Experts believe that there'll be about 80 billion connected devices in use by 2025, enabling the Internet of Things (IoT) to transform many industries.

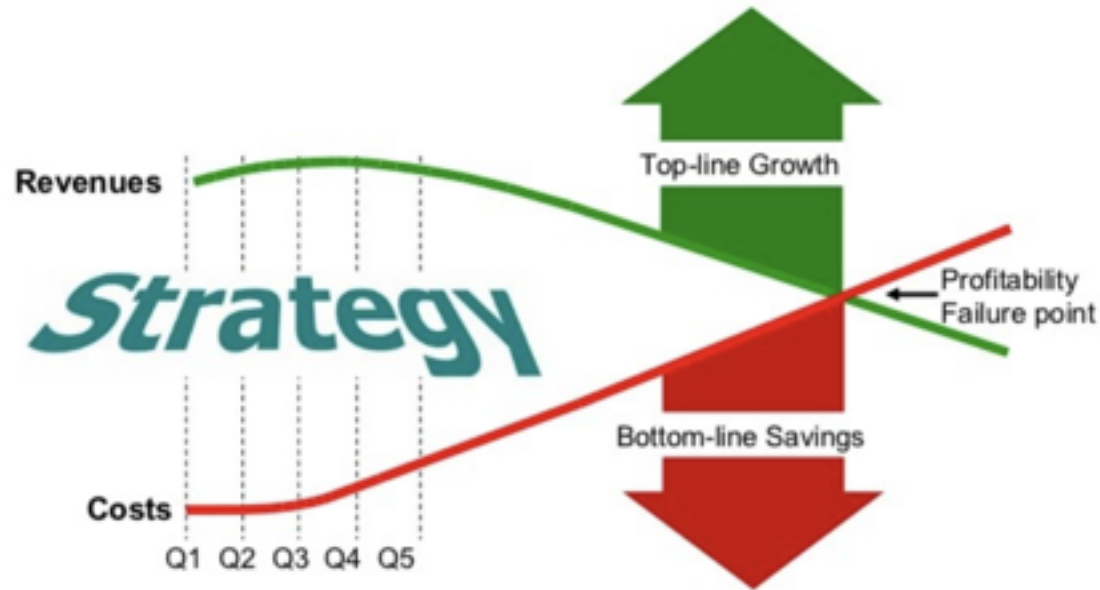

A silhouette of a human head in profile, facing right. The head is filled with a glowing yellow and orange light, suggesting a bright idea or intense thought. Overlaid on the head and the background is a complex network of blue and white lines, resembling a digital or neural network. Some lines are thicker and more prominent, while others are thin and faint. There are also small, glowing blue squares scattered throughout the network.

To master complexity we need to manage

- > Business
- > Technology
- > Transformation

IoT and AI technologies combined
have the potential to change the landscape
of industry with automated, intelligent, and
efficient practices.

Business > Where do you want to push?

Business > How combined systems can help us?

Bottom line Savings

- predictive maintenance
- enhanced productivity
- unplanned downtime
- improve operational efficiency

Top line Growth

- quick response time
- Safety
- competitive advantage
- customer lifetime value
 - reliable
 - predictable
 - actionable

How to develop your business with IoT & AI

Customer Experience

Understand your customers better with IoT solutions, expand products and services and increase your sales.

Operations

Performance management, digitized & automated processes and optimized use of your resources help you reduce costs.

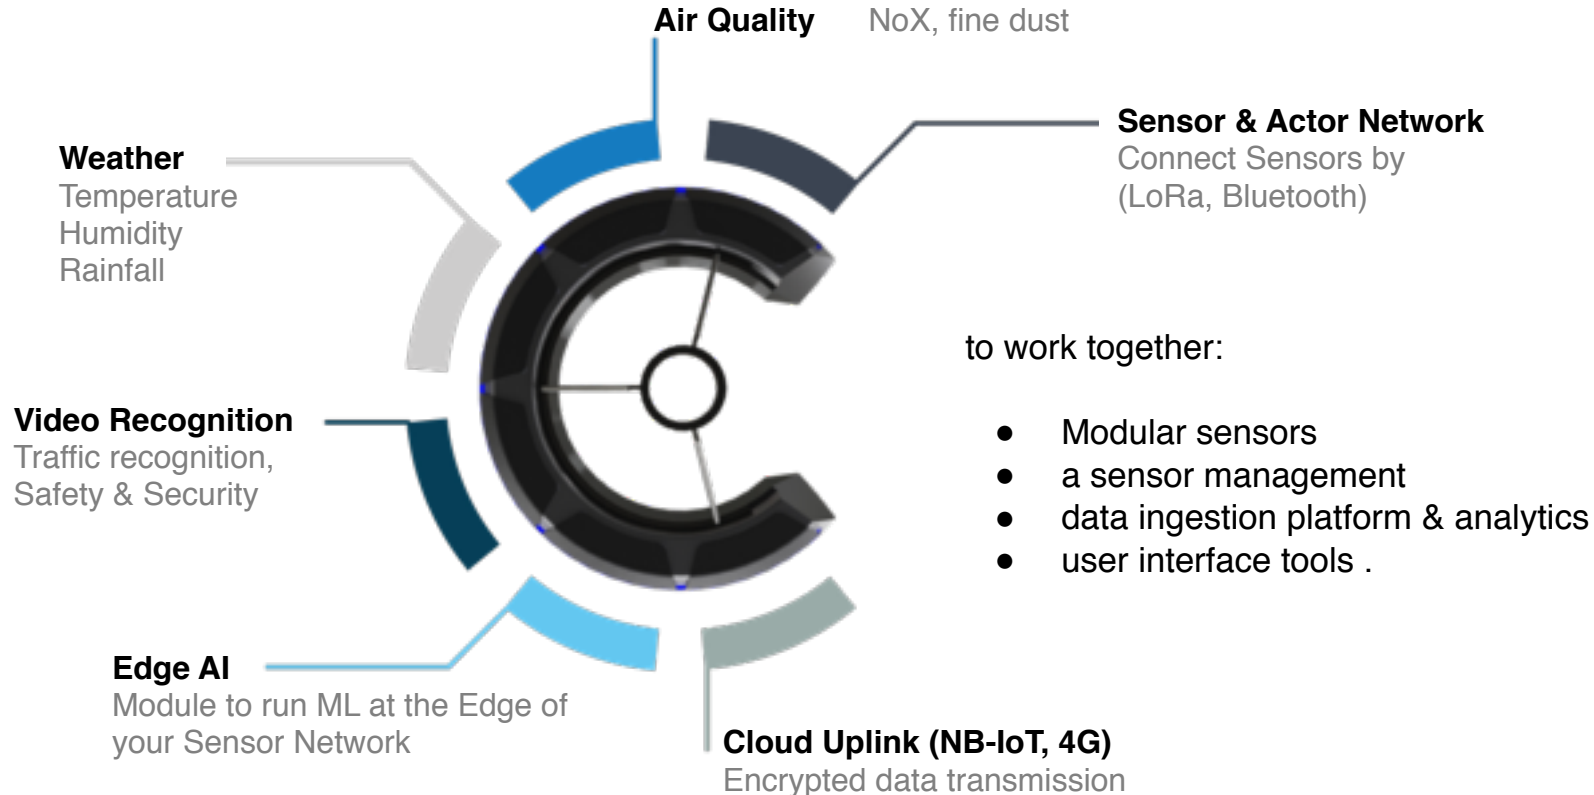

Business Modell

Digitize your business model with IoT and build completely new revenue streams.

complexity requires individual solutions

modular solutions to solve complex challenges

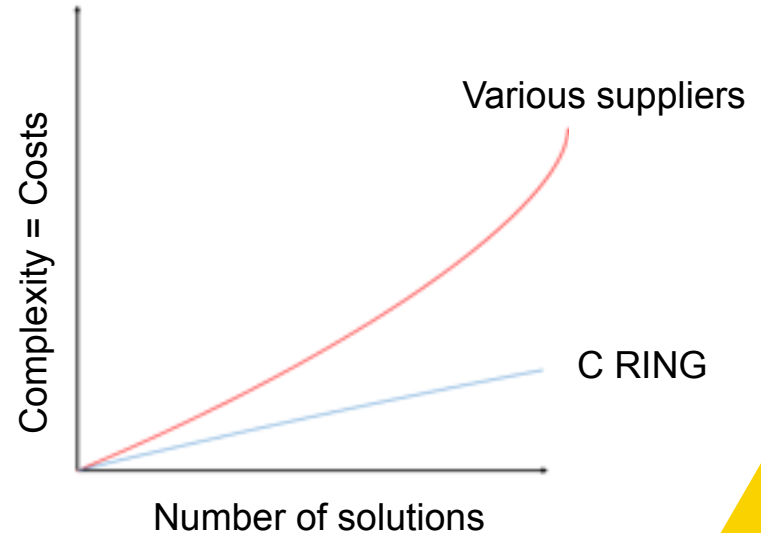

Turnkey IoT & AI solution to accelerate ROI

Conventional solution integration

- Multiple amount of supplier
- Cost of implementation
- Necessary set of capability and skill

- Less complexity of infrastructure
- Economies of scale
- Flexibility
- Partner options

7 Habits for Transformation

1. business strategy before you invest in anything
2. Leverage insiders
3. Design customer experience from the outside in
4. Recognize employees' fear of being replaced
5. Bring start-up culture inside
6. Co Create with others
7. Be open for unexpected opportunities

A stylized profile of a human head facing right, filled with a complex network of glowing blue and yellow lines and dots, representing a digital twin or simulation. The background is white with a yellow triangle in the bottom right corner.

Speed of Transformation

Digital Twins and Simulations help us to solve global challenges faster.

Are we living in a simulation?

The Simulation Argument

Nick Bostrom
(2003)

MAKE THINGS NOT SLIDES.
